

Electronic Patient Record Update

Board of Directors
11 January 2017

To improve patient safety, risk, quality of care, and efficiencies

- Successful go-live 23/24 September 2017
 - January is Month 4 of approximate 6+ month bedding-in process
- “Most complete go-live in the UK”
 - In steady state
 - Safety benefits already being seen
 - Most remaining work and issues now resolved with some exceptions

Key benefits to date

- Strong adoption & positive feedback from staff
- Legible patient information available anytime
- Assess and action from any location, e.g., prescribing
- 100% allergies documented for prescribing
- Safety alerts automatically firing for clinicians, e.g.:
 - Deteriorating patient National Early Warning Scores (NEWS)
 - Allergy to drugs alerts
 - Drug-to-drug interactions
 - Prescription dosing
 - Safeguarding flags

Ongoing work

- Embedding new processes, i.e., right first time data entry
- RTT aggregate regulatory reporting from Cerner in progress
- Opportunities to support out-patient clinics & flow
- Ongoing tweaking of EPR build
- Optimisation and benefits realisation work now in planning stages as bedding-in process is improving
