

# Using CamAPS FX at School

**CamAPS FX is a sophisticated insulin delivery system for people with type 1 diabetes that is very easy to use.**

- ✓ CamAPS FX is an app that continually adjusts the insulin delivery via an insulin pump based on the glucose sensor data it receives.
  - It has to be connected via Bluetooth to the insulin pump and sensor to work, so the phone with the app needs to stay within 6m of the person.
- ✓ People using the system still need to carbohydrate count and give an insulin bolus, via the CamAPS FX app, for any meals or snacks (ideally 10-15 minutes before eating).

## Online Training:

- ✓ FREE online competency-based training for teachers and education support staff is available here: [www.camdiabtraining.com](http://www.camdiabtraining.com).
- ✓ It is recommended that the key worker and / or teacher completes the essential “CamAPS FX Training for Schools” to support them become more familiar with using CamAPS FX.
- ✓ This essential training takes on average 30-minutes to undertake and generates a certificate of competency on completion.
- ✓ Dana Insulin Pump and Carbohydrate Counting refresher training are also available.

- ✓ Please contact the person’s diabetes team if your school requires type 1 diabetes training or further any support.

## CamAPS FX School’s Webinar:

- ✓ Staff might also like to watch the CamAPS FX School’s Webinar for more information.
- ✓ The webinar can be found under the “Webinar” section of the online training: [www.camdiabtraining.com](http://www.camdiabtraining.com)

## CamAPS FX Individual Child Health Plan Template:

- ✓ CamDiab has designed a school’s child health care plan template that diabetes teams are able to customise for their own use.
- ✓ The template can be found under the “Resource Library” section of the online training: [www.camdiabtraining.com](http://www.camdiabtraining.com)
